

ANTI-THEFT DEVICE OF VEHICLE

ABSTRACT OF THE DISCLOSURE

An anti-theft device is provided which can determine whether or not the device should be set in an anti-theft caution condition in order to prevent generation of an unintentional alarm sound and disability of engine start in accordance with a user's selected setting. The device can comprise at least one of an alarm means for generating alarm on detection of theft and an immobilizer means for preventing the start of engine on detection of theft. At least one of the alarm means and the immobilizer means can be set to a caution condition when an ignition switch of vehicle is turned off and when a dimmer switch is either in a high-beam or a low-beam position and a headlight is in a lighting or lighting off state.
